Literatures, Cultures, and the Environment focuses on new research in the Environmental Humanities, particularly work with a rhetorical or literary dimension. Books in this series explore how ideas of nature and environmental concerns are expressed in different cultural contexts and at different historical moments. They investigate how cultural assumptions and practices, as well as social structures and institutions, shape conceptions of nature, the natural, species boundaries, uses of plants, animals and natural resources, the human body in its environmental dimensions, environmental health and illness, and relations between nature and technology. In turn, the series makes visible how concepts of nature and forms of environmentalist thought and representation arise from the confluence of a community's ecological and social conditions with its cultural assumptions, perceptions, and institutions.

## ACKNOWLEDGMENTS

This volume has greatly benefited from the ideas and support of many groups and individuals; we can mention here only a few people who inspired and helped us along the way. The members of the Trans-Atlantic Network in the Environmental Humanities, organized by Sabine Wilke at the University of Washington, were essential to our discussions throughout the process, and several members contributed chapters to this volume. Many thanks are also due to the Rachel Carson Center in Munich, Germany, where the Trans-Atlantic Network met in 2013, as well as to the Environmental Studies Network of the German Studies Association, which sponsored several conference panels as part of the book project. Our home departments also provided much enthusiasm and support; we thank both the German Studies Department at Emory University and the Modern Languages and Literatures Department at Trinity University. The Alexander von Humboldt Foundation and the Deutscher Akademischer Austauschdienst supplied funding to move the project forward. The artist Isaac Cordal graciously provided the striking cover image. The staff at Palgrave Press promptly responded to any questions and handled all the issues in a most professional way. We want especially to thank Ursula K. Heise, editor of the series *Literature, Cultures, and the Environment*, for her encouragement of this project from the get-go and for agreeing to write a preface. Our deepest appreciation for the unceasing support goes to our spouses, Bruce Willey and Mark Garrison: without you both, this would not have been possible. We dedicate this volume to our daughters, Matilda, Fiona, and Shayla, in the hope that their generation will meet the environmental challenges of the present and future more bravely and successfully than our generation has.
